

For 57 years AIED has been synonymous in Italy with contraceptive assistance and sexual education. However, AIED is not only this.

While maintaining its intense political and cultural commitment in the field of civil rights, AIED has, over the past few years, constantly amplified and improved its medical and psychological services, which are fully listed in this pamphlet.

Today AIED's outpatient clinics in Rome are important health service structures endowed with the most advanced diagnostic and technological equipment available, able to respond to all the exigencies of modern preventive medicine.

Thus, within its framework of working to better society – reflecting the group's original ideals – AIED is today proud to offer a full range of the highest quality services to all its patients.

INTERNATIONAL CLINICAL SERVICES OFFERED (IN ROME)

International Clinical Services offered (in Rome)

Our clinic is attentive and sensitive to the needs of our foreign patients who reside in Rome, in particular those who prefer to speak to their doctors in English.

Today we have decided to create a specialized sub-clinic oriented to meeting non-Italian speaking patient needs.

We understand that speaking to a doctor about personal medical questions may not be easy and in special moments (such as pregnancy, menopause, adolescence, and critical health problems) downright difficult. Such conversations become all the more complicated if your doctor does not understand your mother tongue. To this end AIED has decided to establish a special center to welcome you, to listen to you, and guide you through prevention, diagnosis, and therapy. We offer psychological and even legal support should you need these.

GINECOLOGY

The psychological and physical well-being of a woman is always the focus of AIED's attention.

In turn, at the center of this well-being is the health of a woman's reproductive system.

In recent decades the concept of prevention has been integrated into the health conscience of women, especially in the younger generations of the higher socio-economic strata. The need for regular check-ups has become unquestionable, even for women without evident symptoms or diseases.

A gynecological check-up, a Pap test, a mamography/breast examination, and other laboratory exams (pelvic and mammary sonograms, bone density exams) should be repeated with regularity to evidence potential medical problems as early as possible, which obviously aids subsequent treatment.

GYNECOLOGICAL SERVICES

Gynecological visits
